ELECTRONIC, PHYSICAL
& SPECIALIST SECURITY SERVICES

Mayrik bring something new to the national and international security market place, a partnership approach to the provision of Security Services, both electronic and physical, that effectively resolves the ever changing and evolving threats faced by Commerce, Industry and the Individual.

The provision of Security Services is about the assessment of risk and the delivery of solutions that not only deals with the immediate concern but delivers practical, measurable long term improvements and resolution.

Mayrik are novel in that we are an amalgamation of professional individuals and companies coming together under one banner that have comprehensive experience and success of working in the Security Services market place.

Mayrik's personnel demonstrates, a systematic understanding of the client's requirements and is proud of its ability to deliver cost effective and professional services aligned to the many complex and diverse security objectives facing commerce, industry and the individual.

Whether it is the complete installation of complex electronic security systems or the succinct and confidential investigation of individuals we can deliver a one stop solution.

Specialist Security Services

Our philosophy in regards to the provision of Security Services is not one of short term gain but is based upon the understanding, that whilst our services can have immediate impact in many high risk, sensitive and complex situations the development of long term success comes through integrity, professionalism and working in partnership with our clients whilst adopting a dynamic and evolving approach.

Our personnel have been operating in the commercial and the security services industries for many years; we deliberately put commerce first in our descriptions as it is this intrinsic understanding of the needs of business aligned to the tempered world of security that allows us to tailor our range of services perfectly to your requirements

When we allocate operatives to tasks we ensure that their skills incorporate the cultural, ethical and if required religious considerations and align these to the professional skills required to deliver an outstanding job

Please review the services that we offer and we hope that we may have the opportunity to present our company and services to you.

Electronic Security

We are an independent Electronic Security Systems Installer founded in 1990 and experienced in the planning, installation and maintenance of Access Control Systems, Command and Control Centres, Electronic Monitoring Systems, CCTV and all types of Electronic and Physical Intrusion Detection sensors and devices.

We specialise in the design, installation and maintenance of electronic security and communication systems for commercial, military and private installations, our approach is to deliver an integrated, total-facility solution to each project.

We always detail a range of solutions based on budget, application and the stated requirements of each client, we understand that each and every project is unique and therefore requires an individual solution.

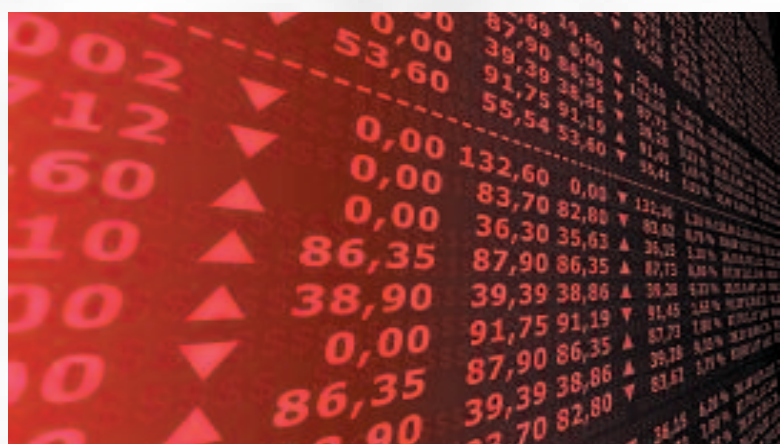

We understand completely the need for confidentiality, integrity and quality of service matched to an ability to work within and for the unique world of our varied client base, we pride ourselves on this element of our service.

We make it our responsibility to understand and interpret our client's needs in order to assist them to provide a secure working environment; protecting assets, personnel and security whilst delivering a functional effective manageable solution.

Please review our product range and allow us the opportunity to furnish you with examples of how we have supplied and fitted integrated solutions to many notable commercial and military customers.

Specialist Security Services

Counterfeit & Parallel Marketing

The Global Market presenting a global economy offering tremendous financial benefits for companies, however counterfeit and parallel marketing, which has grown rapidly in recent years, can cause major issues to corporate profitability, brand integrity and public perception, add to this the social, political and economic disruption caused and the negative impact becomes immeasurable.

Mayrik can help businesses naturally and internationally protect their brands and intellectual property and attack the problem of illicit trade effectively, providing an ongoing proactive, professional and comprehensive approach.

We help companies make informed decisions by supplying information through specialised targeted research whereby the risk both financially and intellectually can be assessed, we will deliver a comprehensive report based on targeted locations and perceived threats effectively allowing you to assess the probability of success.

From this starting point we will then offer solutions to address the source of the problem using local and international intelligence, surveillance and investigation working where appropriate with enforcement agencies and local authorities

Mayrik, promoting recognition through product elimination

Surveillance and Investigation (Commercial)

- Distribution and Depot Theft
- Employee Theft
- Internal Investigations
- Insurance Fraud
- Business Intelligence
- Long Term Sickness
- Environmental Pollution
- Intellectual Copyright
- Benefit Fraud

The cost to your business from any of the above issues can be significant.

Very often covert surveillance can provide the evidence you need to resolve issues, support your reassurance agenda, maintain reputation and save ongoing costs.

Mayrik run covert surveillance and investigation teams skilled in evidence gathering and problem resolution, we work diligently and professionally to gather the information that you need using a variety of investigation skills

All operatives carry out their roles discreetly and are fully equipped with the latest digital photographic, covert video, voice recorder and communication systems.

We can operate whenever and wherever you need us.

Mayrik, confidential investigating providing comprehensive information

Surveillance and Investigation (Personal)

When you require surveillance and investigation for a personal matter it is usually a time of great emotion and it can be as distressing as it is confusing.

Equally an investigation that is initiated to resolve a monetary issue or a personal or business dispute sometimes needs a calm, concise and constructive assessment

Mayrik adopt a professional approach to all our personal investigation cases and apply the same approach to each, that of understanding, sensitivity and professionalism.

Whilst we understand the emotional conflicts that can be experienced by the client we ensure that a structured systematic approach is applied and will identify, from the offset, the problems that may be faced and also the potential consequences of the outcome.

We will always adopt an honest approach and will clearly communicate the obstacles that could be faced along the route.

If we think that a case is initiated based on emotion alone with no realistic chance of success or is being pursued for the wrong reasons we will tell you from the offset and decline the assignment

We can help you with the following:

- Matrimonial Investigations
- Relationship Observations
- Nanny Watch
- Neighbour Watch
- Lost Relatives
- Adopted Persons
- Debtors
- Old Friends
- Ex Directors

Mayrik, applying the human touch in times of crisis

Close Protection

Mayrik are committed to taking those extra steps to ensure that the close protection services that we offer exceed your expectations whether they be overt or covert, to ensure that you, the client can conduct your business safely and securely.

We can operate whenever and wherever you need us priding ourselves on our adaptability to both the commercial and cultural situation ensuring that we follow closely the assignment instructions whilst being considerate of the possibility of ever evolving situations.

Our close protection officers are all high calibre, professionally trained, close protection operatives who have validated and current accreditations, many will also have additional skills gained within varied military, enforcement or security roles.

No matter what the assignment you can be assured that your personnel are protected by operatives who are courteous, well mannered and highly trained in social etiquette and protocol skills.

It is this balance of security, commercial and inter personnel skills which, whilst making our clients feel comfortable and secure, deliver's a service that is measurable, exceptional and allows you to carry out your business free from the fear of threat.

Mayrik, bringing commercial professional skills to compliment your security requirements

Building Integrity and Systems Testing

In today's ever changing environment where opportunist and professional thieves are becoming ever more adept at circumnavigating electronic and physical barriers the need for appropriate defences is critical.

When planning your security measures It is now not a question of staying just 'one step ahead' but of taking significant steps that place your premises, assets, personnel, family or trade secrets beyond the reach of threat

Using experts who are world leading in their field we will attend and risk review your buildings, offices or home and will either stage a break in to test your systems or physically show you, in your presence, how locks can be picked, electronic systems deactivated and systems by-passed

This is no ordinary assessment carried out by ordinary locksmiths or electrical engineers we employ the very best in the business who have many years of operational experience in covert entry and surveillance and whose reputation in the global security market is widely acclaimed and recognised, these experts, having served their apprenticeships in the most stressful and complex of operational theatres, are now applying their crafts and skills in a private capacity

These assessments are extensive and complex and do not come cheap but what price do you put on the protection of your assets and personnel?

Our approach is simple.

1. Assess your current or proposed defences and demonstrate the vulnerabilities and areas that can be compromised
2. Supply a detailed report on the weaknesses and areas of improvement
3. Assist in the assignment or implementation of systems and processes to address the risks.

Mayrik, challenging the boundaries to strengthen the defences

Escort of Valuable Goods in Transit

When it comes to valuable goods, classified documents, fine art or treasured personal belongings the need for reassurance and confidence in your, and its, security is critical.

Working in partnership with you Mayrik ensure that all possible risk is removed allowing the safe conveyance of your assets. We are not in the business of chance but engage with you to ensure, through intelligent risk assessment and concise analysis, that we pursue the path of least resistance and maximum safety

Working nationally or internationally we ensure that your assignment arrives safely and on time. Our escort service combines with our close protection skills to utilise the best resource for the job giving absolute consideration to the final objective whilst being courteous and considerate of any cultural, ethical or unique elements that should be applied to the task

Each assignment is planned and follows a defined set of principals however what is also critical is that we build into each assignment flexible alternatives and that we empower our teams to use their own initiative when unexpected obstacles or threats are faced.

Our assignments can include:

- Stocks and Bonds
- Jewellery, fine art, antiques and collectables
- Government, security, legal and commercially sensitive documents
- Company data, blueprints and intellectual property
- Prestige cars and motorcycles, boats and planes
- Pets, Racehorses and endangered species
- Courier Services

Mayrik, professionally and confidentially delivering your objectives

Control and Restraint Training

There are many employees who may in the course of their duties come across aggressive or agitated people who need to be restrained and controlled for their own and others safety or who they may need to break away from so that they can retreat to a place of safety.

This training is not about confrontational or direct conflict but is about using physiology to 'talk down' the aggressor and if that fails restraint tactics to control them in a safe manner.

This training places significant emphasis on health & safety from both a legislative point of view and of the delegates own safety during the course.

At the conclusion of the course the candidates will have an understanding of:

- The legal framework surrounding control & restraint.
- Using theoretical and practical training to be able to assess when to apply restraint and which technique to use
- To be able to use verbal and visual commands to assist in the control and the de-escalation of situation
- Knowing the limitations of restraint and what is 'appropriate' for the circumstances and the degree of threat and aggression
- How to work in a team in the controlling and escorting of individuals
- The safest way to defend themselves from a variety of wrist & body grabs whilst standing, seated behind a desk, in a bed situation, and whilst in a car for those in the community.
- Know the quickest & safest escape from strangles.
- How to apply an effective stance to counter perceived imminent aggression.
- Assess, & use your environment including furniture and clothing to work simple defence strategies and the quickest possible escape route, to minimise confrontation.

Courses are usually for one or two days and achieve the following qualifications

- BTEC Level 2 Intermediate Award in Physical Restraint Practice (Care & Control)
- BTEC Level 2 Intermediate Award in Physical Restraint Practice (Security)
- BTEC Level 2 Intermediate Award in Physical Restraint Practice

Mayrik, promoting safety and reducing conflict by effective theoretical and physical training

Advanced Covert Entry and Search Training

Without any doubt the greatest risk to the stability of countries and the health and welfare of its citizens is international terrorism.

Terrorism is the cancer that evades the world that we live in, threatening and destroying the very fabric of our lives disrupting the individual, commerce, industry and the political agenda.

We are proud, through our partners, to be able to offer advanced technical training services, bespoke tools and operational support services to select Law Enforcement and Governmental agencies worldwide to counter this very real threat and allow you to observe, record and collate evidence.

From this point the analysis of the risk and the opportunity for pre-emptive strikes can be assessed allowing you to remove the risk, gather intelligence and very much take control of known and perceived threats.

These are top of the range courses, not available in the public domain that have all been designed to provide the learner with not only the technical bench skills required to get the job done but also the practical application knowledge which will ensure the successful operator will leave our courses as a proficient asset for their respective organisation, they include:

- Level 1 CME
- Level 2 CME
- Level 3 CME
- Upgrade CME
- CME (V)
- CME (A)
- CME (B)
- Bespoke CME
- Covert Search
- RET Course

Our instructors have been individually selected for their respective expertise within their chosen field with the course leader internationally recognised as being a leader in this field. They have a vast reserve of knowledge gained from conducting countless operations globally often in hostile, non-permissive environments.

Training can be conducted in the host country or candidates can be taught in a purpose build facility in the UK. At the conclusion of the course there will be the opportunity to purchase appropriate equipment to allow the effective use of the knowledge learned.

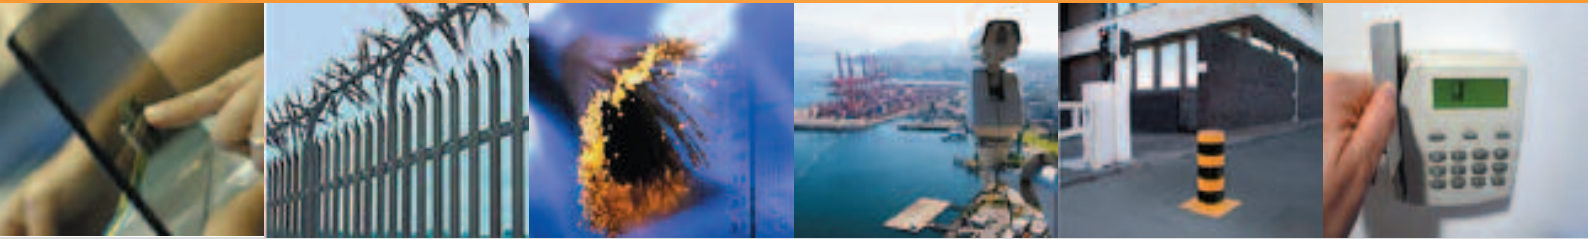

However the downside is that this training is not available to all, to enquire as to its availability please contact us for further information.

Mayrik are proud to be able to offer this unique and sought after course.

Mayrik, penetrating the enemy, gathering the evidence and eliminating the risk.

Electronic Security

Access Control Systems

Access Control Systems, designed to allow authorized personnel to enter designated areas and to prohibit unauthorized access.

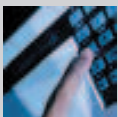

Intercom systems

We use award winning advanced technology in all our Intercoms systems coupled with efficient design we provide our customers with genuine long term reliability across a spectrum of door entry products.

CCTV

Digital CCTV plays an important role in deterring, preventing and reducing criminal behaviour. We push digital technology to the limit delivering integrated systems which include importing card access databases into digital recorders allowing a variety of methods to open gates and barriers.

Intruder Systems

Our Intruder Systems range from small local systems to large complex commercial, industrial or military installations.

Systems may be a single panel or a multi panel site with command and control system connected to a graphical interface, all our systems are to the SSAIB or local standard.

Complete systems or system upgrades cost effectively installed

Gates and Barriers

Our range of gates and turnstiles are made from high quality tubular or box section steel, with a range of colour schemes available.

These gates come with a range of powerful motors to suit each gate application depending on the width of the opening.

All our Turnstiles can be used for a number of applications incorporating the latest modern design and styling features

Traffic Barriers

Our range of Traffic Barriers are made from high quality tubular steel cross section and can be supplied with a specially designed pole arm adapter, which in the event of the barrier arm colliding with an immovable object means the pole will snap under certain pressure.

These range of barriers come in manual form and fully automatic, sizes start with a 3 metre up to 9 metre and combining any of the sizes back to back you can achieve a maximum road width of 18 metres.

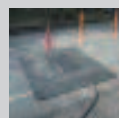

Complimentary systems - Colour under vehicle surveillance system (static)

This system can be installed as a permanent installation fixed into the ground, level with the road surface and provides the operator with a safe and effective means to search the undercarriage of vehicles for hidden items including:

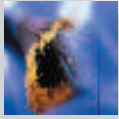

- Explosive Devices
- Firearms
- Drugs and Contraband
- Persons

This system provides an effective barrier against illegal shipments, terrorist attack or other threats.

Complimentary Systems - Colour under vehicle surveillance system (mobile)

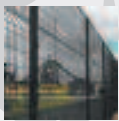

A portable installation of the system fixed into a heavy-duty rubber ramp assembly. The Mobile system is identical to the static system apart from one difference: The system is contained within a rugged enclosure for above-ground mounting.

Fibre Optic Solutions

In today's modern world where technology continues to change Fibre Optic Transmission is starting to become cost effective.

We have the knowledge and experience to install any type of Fibre Optic cabling to meet your requirements; we provide design, scope of works and a full set of schematic drawings for the installation.

Physical Fencing

Palisade Fencing System - Palisade is the world's most popular fencing system for locations requiring security and vandal resistance. Palisade is assembled on site by

bolting or riveting the vertical pales to the adjustable angle iron horizontals enabling ground contours to be easily overcome without detailed pre planning and measurement.

Welded Mesh Fencing System - Welded mesh fencing system provides a strong but elegant boundary fence without being a visual barrier. Heavy wires are electrically welded at each intersection to provide the security of a traditional welded mesh fence, while several reinforcement ribs fortify the panel rigidity.

Physical & Electronic fencing

High Security "I" Fence System - The robust and tested steel cage fence of "I" Fence meets the highest safety requirements.

The fence panels can be raked to suit even steep ground slopes and the most difficult ground conditions. What's more, thanks to the mechanical security and electronic detection, the fastest possible detection time can be achieved. While the special noise prevention provides the best possible preparation for acoustic detection.

"S" Fence System - The "S" Fence system is a unique fence intrusion detection system resulting from close collaboration with fencing manufacturers and experts in electronic intrusion industry and can be adapted to certain other types of fencing.

Effective perimeter fence intrusion detection based on vibration sensing relies on matching the response of an electronic sensor with the mechanical characteristics of the fence itself.

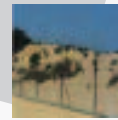

Electronic Fencing

Electric Fence System - The Electric Fence System offered has the capability to detect intruder related activity on the fence and to administer painful, yet harmless, electric shocks in response to such activity.

Intruder detection capability, coupled with the psychological deterrent of receiving electric shocks, makes system an effective solution for many perimeter protection applications.

Electronic Option Radifir - This Radio Frequency Intruder Detection system is one of a range of technologies developed to offer complete protection in places where uninvited guests need to be discouraged. It is discreet making it ideal for "proximity detection" when an intruder will walk unknowingly into its invisible field.

The strategically placed transmitters and receivers will cover the vulnerable area with a blanket of radio frequency field whose characteristics are monitored by an analyser to be dealt with in an appropriate way, with the alarm outputs linking into command control centres for display of the intrusion point via a graphical user interface backed up with CCTV images.

Electronic Fence Wire System

Perimeter security is an effective deterrent to intruders with metal fences being the most common form of physical barrier. The most determined intruder can, however, defeat most types of physical barrier, usually by cutting through or climbing over the barrier.

Many electronic security systems focus on detecting intruders after they have entered the property. Often this will result in police or security personnel being alerted too late to prevent the intruder achieving their objectives.

A well designed perimeter intrusion detection system, in which the detection technology is well matched to the physical barrier surrounding the site will not only provide reliable detection of intrusion attempts, but will offer the earliest possible warning of an attempt to enter the site.
